

Million Dollar Tan

Australian Importer

*Tans will last at least a week. Average is 5-12 days. The best way to keep your tan lasting as long as possible is to exfoliate prior to tanning and keep your skin well moisturized after tanning. Million Dollar Tan can be used on all skin types. Simply adjust the amount of tanning solution you apply to the body.

*Barrier cream can be used on the feet, elbows, knees and hands to avoid over tanning these areas. Wipe the barrier cream clean at the end of the tan and lightly spray if necessary.

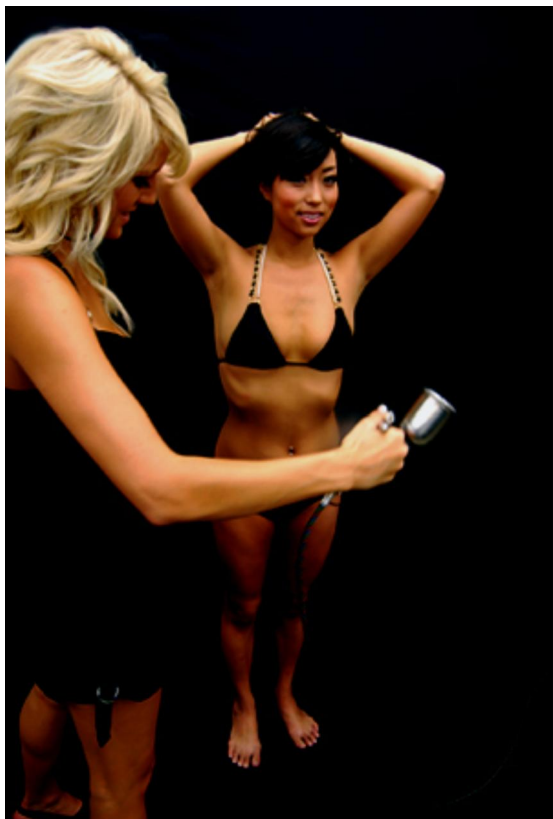

Step By Step

An average amount needed per body is 2oz (60mm) if sprayed using the correct setup and technique. It is recommended to use a tip size of .5mm such as Iwata's Eclipse HP.BCS or an Iwata RG.3 with a .6mm tip.

Applying the tan evenly over the body being careful not to let the solution bead up on the skin by applying to heavy coats, light is best.

You can adjust your pattern on the gun down for smaller places such as the arms and legs. While opening the fan up larger on the broader parts of the body. Once you have covered the body you can come back with an airbrush or turn the pattern down on your gun to accentuate the breast line and under the buttocks, along with other muscle areas.

Million Dollar Tan's bronze color will allow you to have a tan immediately after you are finished. Once showering, the guide color will wash off. You will notice the DHA react with the skin and bring out the true tan the next day.

MDT is excellent for Professionals and Amateurs alike.

NOTE

We recommend wearing light colored clothing. After tanning the solution may rub off on the clothing until your first shower, but will wash away. Wait at least 6-8 hours before showering. Any imperfections will even out at your first shower. You may see the tanning solution sitting on your skin, do not worry as it will even out completely. Million Dollar Tan is equipped with a bronze color as a reference to where it is being sprayed. The DHA chemical in the tan is what will produce the tan that you will see the next day after showering. Million Dollar Tan does not clog the pores or cause breakouts. You can use an airbrush to tan, however we recommend a larger gun for more even coverage and to reduce the chance of spotting. See our tanning section for kits and recommended set ups.
